Social Distancing Reminders/Notifications

In addition to offering the most secure and simple solution for accessing doors, elevators, systems and applications, the Nymi Band can now detect the proximity of other Nymi Bands and remind users that move too close to each other to maintain social distancing policies by sending visual and/or vibration alerts to each user. Each event is logged and available for review by users and authorized administrators.

Contact Tracing

These events can be uploaded to a central Nymi Enterprise Server whenever the Band is within range of an enabled mobile device, or Bluetooth beacon that is connected to your corporate network.

In the event of a positive COVID-19 diagnosis (or other incident that requires contact back-tracing) users and authorized personnel may review contact logs to determine who an individual has been in contact with, when, and for what duration. Analysis of this data can also help to identify high-risk areas and behaviors.

Giving Privacy Control Back to the Worker

Privacy stands at the core of the Nymi Solution: users retain complete control over their biometric data, which never leaves the Nymi Band. Also, the system can be configured to allow users to opt-in/out of any monitoring, and users may erase their biometrics and credentials from the Nymi Band at any time.
