

# Power House

Centralized Charging & Storage for Nymi Band Deployments

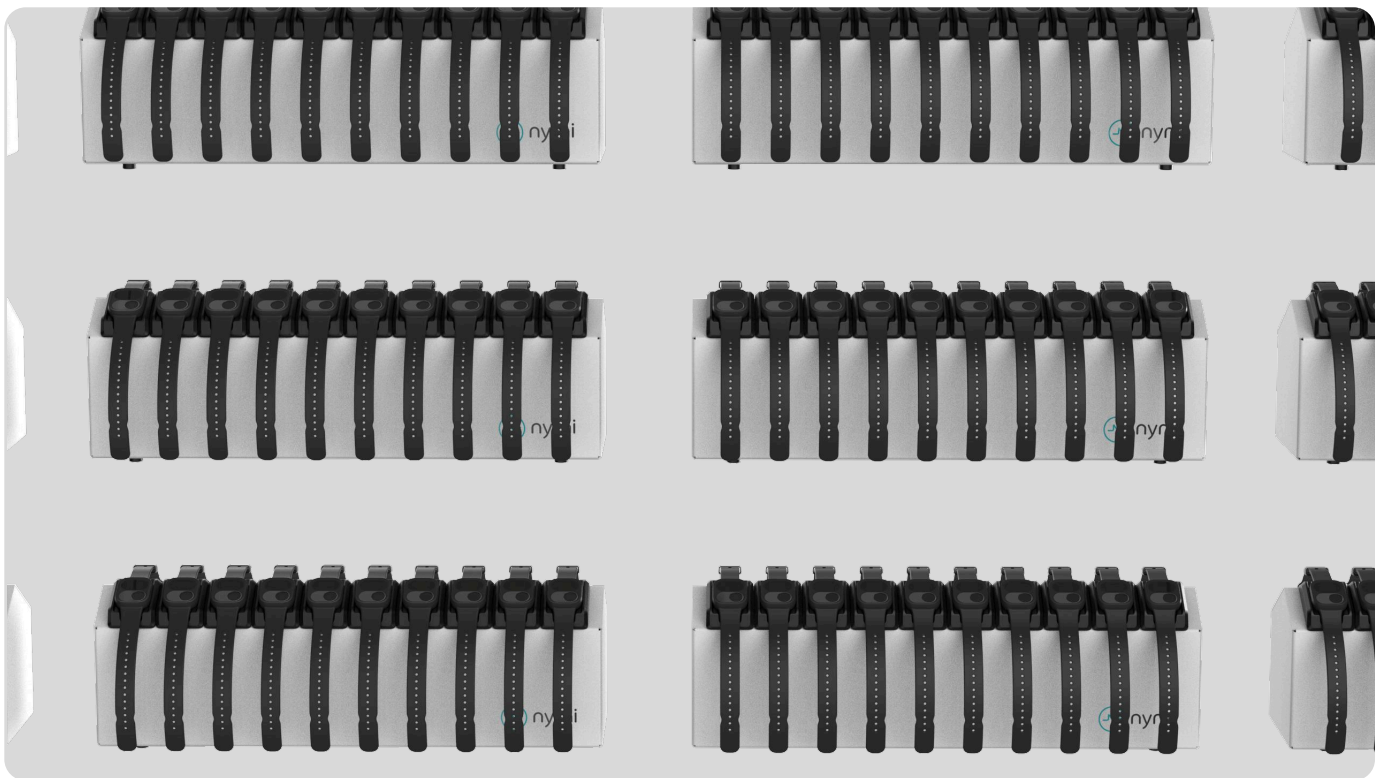

# Built to Fit Into Your Shop Floor Operations

## Always-Ready

The Power House supports consistent device availability by streamlining daily operations for charging and storage.

## Scalable

It adapts to your site needs with flexible wall-mounted or tabletop configurations that support growing teams.

## Supports Nymi Band Deployments at Scale Across GxP Environments

The Power House provides a structured approach to managing Nymi Bands across:

- Cleanrooms and controlled environments
- Shared workstations and shift-based operations
- Many user, multi-shift manufacturing sites

## Design

Modules can be mounted on the wall or set on a flat surface. 10 Nymi Bands per station.

# Recommendations for Planning a Wall-Mounted Power House Station

No more than 5 Power Houses per column when arranged in a stack

Leave at minimum 10 inches between Power Houses (from bottom to bottom) for ease of viewing the display on Nyimi Bands

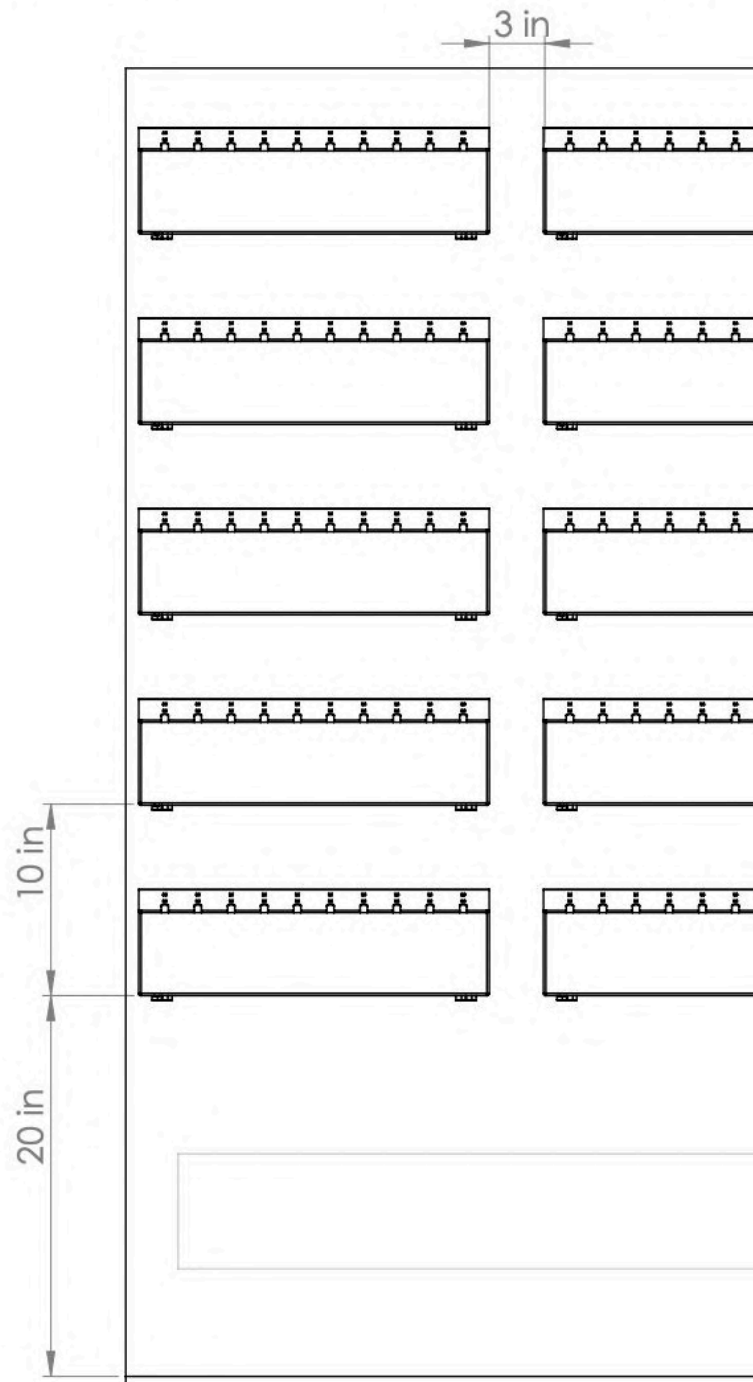

The bottom-most Power House in a column should be at least 20 inches away from the floor

## Horizontal Spacing

Leave at minimum 3 inches between Power Houses when arranged in a row for ease of cleaning

## Power Source

The power source can be underneath the charging station area for easy access and all the wires will be out of the way

## Questions?

If you have additional questions on the Power House, please reach out directly to your Nymi Sales Representative.
